

# THE MOVING EARTH

EN | DA

Lars Becker-Larsen, Denmark, 2009  
52 min. | DK/Documentary

The Earth is not the immovable centre of the world but a planet in orbit around the sun: this was the claim made by the astronomer Nicolaus Copernicus in 1543. To the Christian church this was a heresy that contravened the Word of God. For centuries to come great scientists like Tycho Brahe, Kepler, Galileo and Newton doggedly pursued the notion of a moving earth, and from this epoch-making process there emerged not only a new view of the world but the modern natural sciences.
